Executive Summary
AIDS in Africa: Three scenarios to 2025
We wish to extend our gratitude to all those people and organizations who have given so generously of their time and expertise to the project. This has been given in many forms—both directly in terms of participation, such as in workshops and exerts, or indirectly in the form of interviews, analysis papers, and discussions. A full list of people who contributed to the project can be found in Appendix 1.

UNAIDS thanks the following for generous sponsorship of the project: AIDS in Africa: Three scenarios to 2026:
- African Development Bank
- Becton Dickinson
- Bill and Melinda Gates Foundation
- Canadian International Development Agency
- Department for International Development, UK
- Development Cooperation Ireland
- Merck & Co., Inc.
- Pfizer Inc.
- Rockefeller Foundation
- Royal Dutch/Shell Group
- Swedish International Development Agency
- United Nations Development Programme
- United Nations Economic Commission for Africa
- United States Agency for International Development

UNAIDS would particularly like to thank the African Union for the role they have played in helping this project to completion, initially in helping with the identification of participants, and throughout the project as a member of the steering committee.

The project has been supported by a steering committee that included the initiating partners, the UNAIDS Secretariat, the United Nations Development Programme, the World Bank, the African Development Bank, and the United Nations Economic Commission for Africa, together with the African Union and a representative of African civil society, as well as representatives of the project sponsors.

Our gratitude goes to the Royal Dutch/Shell Group, who kindly provided their expertise—a field they pioneered more than 30 years ago—with the project. Shell graciously provided financial and logistical assistance and support, including their scenario methodology.

- The AIDS in Africa scenarios project is a synthesis of many diverse and sometimes opposing perspectives. It does not represent any single individual’s or institution’s viewpoint.
- The aim of the scenarios is to provide a tool to help decision-making rather than a set of prescriptions about the future.
- Some aspects of scenarios may be described with numbers, but the richness of the scenarios as a strategic tool stems partly from the fact that they can include more intangible aspects of the future. The numbers and projections in the scenarios are illustrations, rather than predictions of what might happen.
Executive Summary

AIDS in Africa: Three scenarios to 2025
Welcome to
AIDS in Africa: Three scenarios to 2025

The decisions we make about the future are guided by our view of how the world works and what we think is possible. A scenario is a story that describes a possible future. Building and using scenarios can help people and organizations to learn, to create wider and more shared understanding, to improve decision-making and to galvanise commitment and informed action. People can use them to challenge their assumptions and implicit beliefs, and look beyond their usual worldview.

Scenarios draw on the age-old tradition of story-telling to help people think more imaginatively about difficult problems. Across the world, every culture tells stories, using them to make sense of the world and pass on that understanding from generation to generation.

This project uses stories rather than projections to explore the future of AIDS in Africa over the next 20 years. Statistics may give a succinct and tragic snapshot of recent events, but they say little of the AIDS epidemic’s wider context, or its complex interconnections with other major issues, such as economic development, human security, peace, and violence. Statistics can only hint at the future. Indeed, by 2025, no one under the age of 50 in Africa will be able to remember a world without AIDS.

This executive summary is extracted from the complete publication. It is intended to deepen people’s understanding of the possible course of the AIDS epidemic in Africa over the next 20 years, its context and impacts, and how particular policies may shape Africa’s future.

The book is rich and detailed—reflecting the complexity of its subject matter.

“We live by hope, but a reed never became an Iroko tree by dreaming.”
—Nigerian proverb.
Some readers may be tempted to turn immediately to the numbers—how many treated, how many new infections, how many deaths by 2025? They are urged to remember that the scenarios are not predictions and that the goal of this project has never been to generate statistics. Its aim has been to explore how seemingly disconnected events and trends (for example, patterns of global trade, the education of girls and women, terrorist attacks on the other side of the world, the rise to power of a certain political regime) can work together to expand or limit an epidemic.

The scenarios were initially developed by a team of about 50, mainly African, men and women. Most of them live and work in Africa, dealing daily with the effects of the epidemic. They brought a wide range of experience and expertise, and were anxious to look beyond, and below the surface of, everyday events, sharing and building on their wide range of understanding.

As the project developed, the team used the image of a hippopotamus in a river to remind themselves of this idea. This is because, when a hippopotamus stands in a river, only a small part of it shows—most of it is hidden. In the same way, if we only pay attention to everyday events, we may miss the complex patterns and structures that underpin them. A diving hippopotamus reminds us that patterns of behaviour lie below the surface of events, and the structure of the system lies deeper still.

Of course, given the widely varying circumstances, impacts, and effects of the epidemic in countries across Africa, no set of scenarios can describe all the possible futures that could occur. This project has set out to be provocative rather than comprehensive, stimulating questions and exploration, rather than trying to provide all the answers. We hope that the scenarios will prompt further thinking about the future of the epidemic, not only for the whole of the continent, but also for individual countries and communities. In stimulating further policy dialogue and thinking in the national context, the scenarios may need to be adapted to the particular social, economic, and epidemiological conditions that apply in a particular nation—some suggestions for exercises to explore these issues are made in Appendix 6 of the main publication.

For those who want to explore further, the accompanying CD-ROM contains most of the material commissioned for the project, both research papers and interviews, searchable by keyword. It also provides detailed reports of the project workshops and a number of presentations of the scenarios that can be used in group work.

These scenarios represent a crucial step in making sense of the future of the AIDS epidemic in Africa. It is the hope of the project initiators, participants, sponsors, and core team that this material will provide an essential starting point, not only for exploring and expanding people’s understanding of the epidemic, but also for sharing that understanding with others.
The following pages list the complete contents of the main publication. This booklet provides the complete text of the executive summary.

Contents

Section 1

11 Executive summary
13 The nature of the scenarios
13 A diverse continent and a diverse epidemic
13 Key assumptions and uncertainties
14 The five critical and uncertain forces driving AIDS in Africa
15 The scenarios
15 Tough choices: Africa takes a stand
17 Traps and legacies: The whirlpool
19 Times of transition: Africa overcomes
20 Implications and learning from across the three scenarios
22 Comparing key issues across the three scenarios
22 Exceptionalism versus isolationism
22 Resource needs and utilization
23 Using the scenarios
23 In conclusion...

Scenarios and their power

Section 2

Starting points
The virus and its impact
The spreading epidemic
The impact of AIDS
Responses to AIDS
National responses
International responses
Africa: a vast and diverse continent
Countries and cultures
Political diversity
Conflict
Population, movements, and connectivity
Economies: trade, aid, and debt
Scientific advances
The human factor
People living with HIV
Mental health and stigma
New and old forms of social capital

Section 3

Driving forces
The five critical, uncertain forces that are driving change
The growth or erosion of unity and integration
The evolution of beliefs, values, and meanings
The leveraging of resources and capabilities
The generation and application of knowledge
The distribution of power and authority
Comparing driving forces
Branching points
Interactions that create the scenario dynamics
HIV and AIDS programming
Access to and uptake of AIDS treatment
Gender relations
Predetermined forces
Shocks and radical discontinuities
Scenario analysis

The scenarios
Tough choices: Africa takes a stand
Traps and legacies: The whirlpool
Times of transition: Africa overcomes

Common challenges
Defining the crisis is crucial
The impact of the epidemic is yet to come
Exceptionalism versus isolationism
The danger of swift dividends
Dependency, independence, and interdependence
The dangers of ignoring local culture and meaning
The problem with policy triage and the public debate
Leadership is not enough but is important
There is no magic bullet
Bad action may be worse than no action
Gender
Taking care of orphans and other vulnerable children
Mental and physical treatment
Who benefits from social change?
Local responses are critical
Religious transformation
The significance of time

Funding the necessary response
HIV and AIDS programme expenditure by source
Spending more buys better health and more years of life
Spending money to save money
The balance between prevention and care
Orphans and vulnerable children
Per capita income in Africa
Success stories of early interventions

The AIDS epidemic
People newly infected with HIV
Adults living with HIV and AIDS
Children living with HIV and AIDS
People dying from AIDS
Scaling up prevention
Comparing key elements across the scenarios
Appendices

Appendix 1: Costing and coverage estimations
Prevention
Care and treatment
Orphan care
Policy, management, administration, research, evaluation, and monitoring
Training and infrastructure

Appendix 2: Modelling assumptions
Data
Handling the data and terminology

Appendix 3: List of contributors

Appendix 4: Glossary

Appendix 5: Bibliography

Appendix 6: Exercises to support the scenario process
Exercise 1: Short overview
presentation of the scenarios
Exercise 2: Telling your own stories
Exercise 3: Developing country-specific scenarios
Exercise 4: Test or challenge a vision or strategy

Acronyms

AIDS Acquired immune deficiency syndrome
ART Antiretroviral therapy
ARV Antiretroviral drug
AU African Union
DAC Development Assistance Committee (of the Organisation for Economic Co-operation and Development)
FDI Foreign direct investment
GDP Gross domestic product
GNI Gross national income
HAART Highly active antiretroviral therapy
HIPC Heavily indebted poor countries
HIV Human immunodeficiency virus
IBRD International Bank for Reconstruction and Development
IMF International Monetary Fund
MDG Millennium Development Goal
NEPAD New Partnership for Africa's Development
NGO Nongovernmental organization
ODA Official development assistance
OI Opportunistic infection
OVC Orphans and children made vulnerable by AIDS
PLWHA People living with HIV and AIDS
PRMTCT Prevention of mother-to-child transmission of HIV
PRSP Poverty Reduction Strategy Paper
QALY Quality-adjusted life year
STI Sexually transmitted infection
TRIPS Trade-related aspects of Intellectual property rights
UNAIDS Joint United Nations Programme on HIV/AIDS
VCT Voluntary counselling and testing (for HIV)
WTO World Trade Organization
The decisions we make about the future are guided by our view of how the world works and what we think is possible. Scenarios are stories about the future; but their purpose is to help make better decisions about the present. People can use them to challenge their assumptions and implicit beliefs, and look beyond their usual worldviews.

This book and the accompanying CD-ROM are intended to deepen people’s understanding of the possible course of the AIDS epidemic in Africa over the next 20 years, its context and impacts, and how particular policies may shape Africa’s future.

"No progress can be made by any nation unless serious attention is given to the control of malaria, TB and HIV/AIDS."
—President Obasanjo of Nigeria, May 2004.
